

Interactive Table

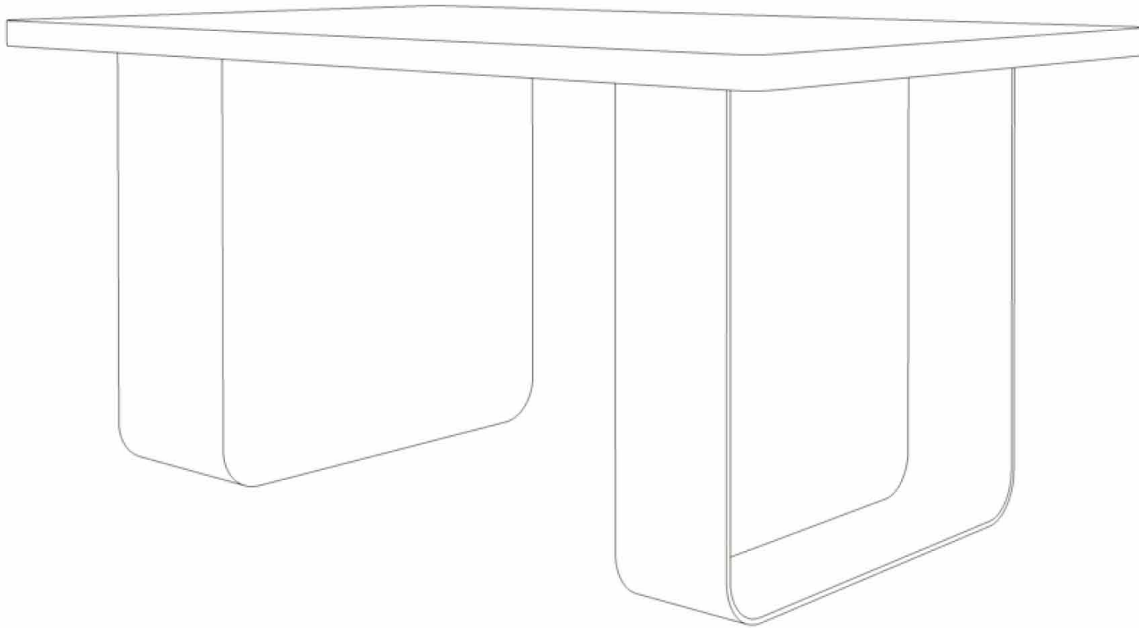

235 MEDIA
®evolution

The Interactive Table developed by 235 MEDIA ®evolution is an ideal medium for explaining complex topics to larger groups of visitors. The surface of the table works like an oversized touchscreen, with the desired information projected directly onto the table from above. The basic application on the interactive table is a menu selection system, which can be individually adapted to each new project. It can also be expanded by including games, videos, and camera transmissions, or be used to control lighting, sound, and video projections elsewhere in the room. Hence, the Interactive Table is a highly sophisticated system suited for presentation, entertainment and communication purposes.

Interactive Table

Facts

- Sensor system covering the entire surface (1,382 x 1,050 mm), evaluation electronics
- Different forms and sizes on request
- Long product life as a result of a scratch resistant surface and sturdy construction
- Combination of media database, content management system (CMS) and interactive application
- Simple maintenance and updating of content
- Individual surface design with dynamic graphics
- The content can be adjusted and compiled individually to suit each location
- Single main topics can easily be made visible or invisible
- Any number of presentation units at locations distributed worldwide
- Automatic update routine from a server via Internet
- Can be extended by any number of languages
- Flexible depiction media: Interactive Table, touch monitor or website
- Simple licensing version, short dated terminable
