

KLICK-KLACK

The comfortable start/stop control

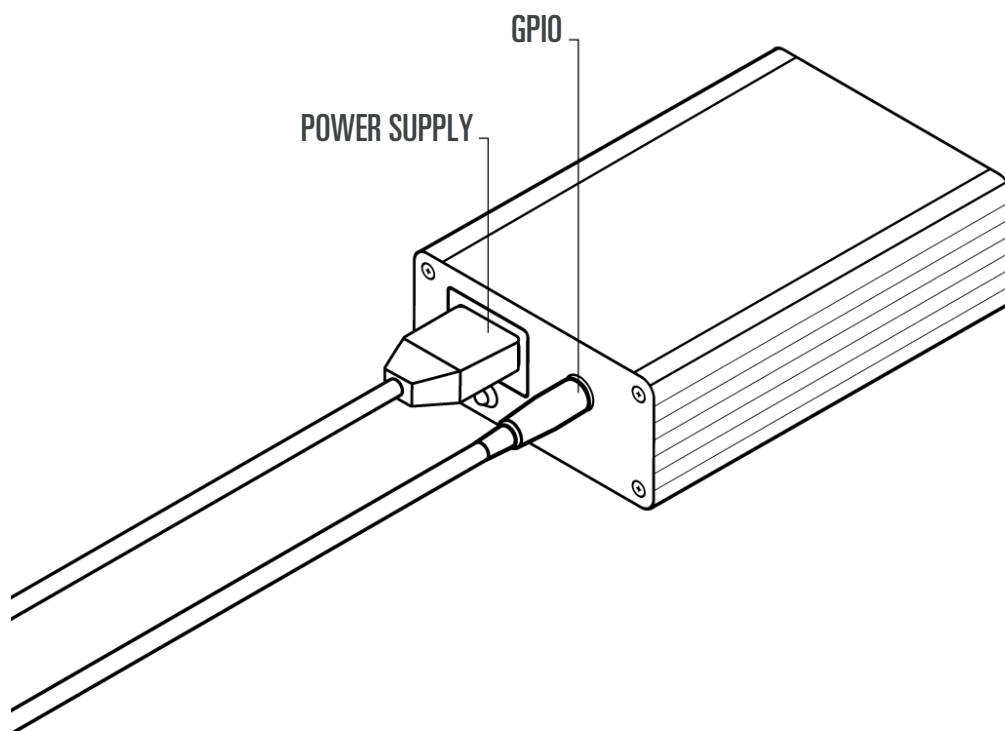

KLICK-KLACK ensures that PCs are started when switching on the switching current of an exhibition or installation and to carefully shut-down the PC when switching off the switching current in order to protect the data and hardware from damages.

- No loss of data due to careful shut-down of PCs
- Protects the hardware
- Can be installed as an external device or in the PC housing
- Is individually adapted to your specific needs

KLICK-KLACK

The comfortable start/stop control

Switching current input: 230~V, 24V or 12V

Please ensure sufficient ventilation when operating the device. KLICK-KLACK is only designed for use in interior spaces and must not come into contact with moisture or be used in moist surroundings.
